

EMSP 1338: Review for Exam #3

Definitions and Concepts:

(60 multiple choice questions)

active acquired immunity	immune response
allergy	immunogen
anaphylaxis	inflammatory response
anatomical barriers	impartiality test
antibody	important non-verbal communication techniques
antigen	in utero protection is accomplished how?
apoptosis	interpersonal justifiability test
authoritarian	interpretive technique
authoritative parent	interviewing a child
autoimmunity	isoimmunity
autonomy	justice
avoidance language	learning techniques of infants and children
B cell deficiency and treatment	life span/life expectancy
B lymphocytes do what?	metabolism changes with age
beneficence	morals
bonding	most abundant type of tissue
resp rates of infants, toddlers, school-age, and adolescent	natural immunity
building trust and rapport	neurotoxic
catabolism	nonmaleficence
cell-mediated immunity is described as?	pulse rates for infants, toddlers, school-age, and adolescent
changes to the elderly	open-ended, closed, leading, complete questions
characteristics of all five immunoglobulins (M, G, A, E, D)	passive acquired immunity
charact. of infants, toddlers, school-age, and adolescent	pathogen
chemotaxis	permissive parent
consequentialism	reflective language
deontological method	role of mast cells in the inflammatory response
dissemination technique	secure attachment
effects of aging on the immune system	social distance
ethical relativism	specific/nonspecific and internal/external
ethics	speed of immune and inflammation systems
goal of antiviral therapy	stress, coping, and illness interrelationships
histamines	T lymphocytes do what?
how to deal with hostile patients	type of hypersensitivity reaction (I, II, III, IV)
iatrogenic infection	types of reasoning
immune deficiency	universalizability test

EMSP 1338: Review for Exam #3

Possible short answer or essay subjects:

(2-4 short answer/essay questions)

ABO blood type and Rh factors for Universal Donor and Recipient

Elements of non-verbal communication

Feedback techniques

Normal vital signs (excluding temperature): Table 12-1

Physiological effects of catecholamines

Relationship of legal, ethical, and moral issues in medicine

Ways to build trust and rapport with your patient
